# Mawad Testing

1)

In the product information section, "Published" was not selected and in the Pricing Configuration, I did not select or added any input in the Sample pricing nor in Shipping yet I could still turn on the Sampe Available and Use default sample shipping

2) There is an empty section of General Attributes

3) In the product and description specifications section, I can still delete the 1st document and it doesn't show anymore.

4) In shipping product configuration section, I selected paid by = buyer, shipping charge type = flat however, the input box of flate rate amount wasn't changeable even if I selected again paid by = buyer, shipping charge type = flat. When I changed the est shipping days value, then it worked.

5) In shipping product configuration section, If my shipping charge type = flat and amount = 5 but I changed shipping charge type = per unit then changed back to flat, it doesn't show the value 5 again. Not sure if that's how its intended to be.

6) Refreshing page still resets everything I did before I can save a draft (I refreshed because I couldn't upload any document since I deleted it)

7) Product media section: When I opened my saved draft, it showed I had 2 images in the thumbnail which I didn't upload. It took them from the gallery images that I put. Shouldn't thumbnail be 1 image only? Also, when I deleted the image on the right, it deleted the other image too however, when I deleted the left image, the right image wasn't deleted. (I cannot record a video to show this because I cant save a draft since it still shows its bugged)

8) Draft still cannot be saved
